LunchBox Tip: Automatic Student Import

Automatic Student Import

This LunchBox feature allows the school district's student information system to download students into LunchBox on a prescheduled automated basis. This feature frees up the food service department to manage the cafeteria operations versus inputting new and changing existing student information.

The fast pace environment of school lunch requires a dedicated staff of food service employees and not technology specialists. By automating Lunchbox with the districts student information system, time is better managed and student record keeping is enhanced.

The feature allows new students to be imported into the LunchBox system and existing students information to be changed without cafeteria staff intervention. LunchBox tracks all changes and provide a daily report informing cafeteria staff of changes. To take advantage of this feature, call support today.
