STG LunchBox Tip: Tracking Reimbursable Meal Sales Inventory Management

It is important to track accurate meal sales as this directly affects inventory management and reimbursable dollars.

Lunchbox provides the capability of tracking each reimbursable meal by the type of meal sold, not just the lump sum of free, reduced and full paid meals. This is accomplished by setting up each meal (i.e.; Hamburger, Chicken, Fish, etc.) as a product and then assigning that product to your menu screen.

As participants come to the cash register, the meal on their tray can be selected from the menu screen to track the exact type of meal sold. In the POS Back office, run the reimbursable meal sales or the reimbursable meal sales to generate detail reports. Utilizing this functionality within Lunchbox will assist in inventory and production management.
